

AARNAV GARG

EXPLORING DATA
SCIENCE AND ML

Aspiring Data Scientist focused on Python, Machine Learning, AI, Data Analysis, and Generative AI. Experienced in building hands-on AI projects involving data preprocessing, embeddings, semantic retrieval, and RAG systems. Passionate about transforming data into practical insights and building intelligent solutions for real-world problems.

Experience

1. EchoLearn — AI-Powered Adaptive Learning System

- AI tutoring system designed for Class 10 students that uses Gemma, RAG, embeddings, ChromaDB, semantic retrieval, and speech interaction to provide personalized learning. The system analyzes a student's responses to identify learning gaps and adapts explanations accordingly.

2. FITCLIK — Social Fitness & Activity Tracking Platform

- Fitness-focused social application combining GPS activity tracking, running analytics, nutrition tracking, and social engagement. Designed to transform fitness activities into interactive experiences through real-time data, maps, and personalized statistics.

3. Friday — Personal AI Desktop Assistant

- AI-powered desktop assistant inspired by futuristic voice assistants, combining natural language interaction, AI processing, automation, and a modern desktop interface to help users interact with their computer through conversational commands.
